## NLP-Smart Assistant for eYantra IOT

### ■ Objective

- 1 Building a NLP based assistant to access eYantra IOT platform through text and voice control over the Web portal and through Google Assistant!

### ■ Deliverables

- 1 The assistant should at least be able to perform all the frequent queries that take place on IoT platform.
- 2 User should see device data in the chat interface itself.
- 3 A web chatbot interface to be integrated with IoT Platform

Task.no	Task	Deadline
1	Understanding e-Yantra IoT Platform and its APIs	2 days
2	Getting familiar with Dialogflow and required programming languages	3 day
3	Gathering phrases to train the agent.	3 days
4	Adding entities and intents	4 days
5	Take actions on the output of phrases returned by API properly and ask for missing information if any	2 day
6	Testing this and the speech interface and retraining on more examples if required.	3 days

Task.no	Task	Deadline
7	Develop a proper web interface to be integrable with IoT platform designing throughout the website.	4 days
8	Integration with E-Yantra platform and a demo application	2 day
10	Learning VueJs and component designing	4 day
11	Learning Blockly & other alternatives	3 days
12	Designing algorithm for converting UI bloks to lambda code with loose coupling	4 days
13	Testing and improving efficiency	1 days
14	Documentation	2 days

# What we have done so far...

## Progress Presentation-I

### Team:

Onkar J. Sathe  
Rohit G. Rath

### Mentors:

Omkar Manjrekar

Deepa  
Avudiappan

## Overview of Project

## Overview of Task

## Tasks Accomplished

## Challenges Faced

## Future Plans

## Thank You

- Understanding eYantra IoT Platform and its APIs
- Learning about DialogFlow & RasaNLU and how a virtual assistant works behind the scenes

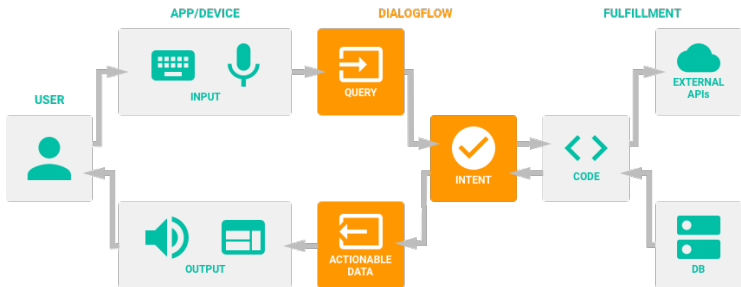

Dialogflow

- Understanding the working of AWS-IoT and connecting ESP8266-DHT sensor to it for testing of the assistant

# What we have done so far...

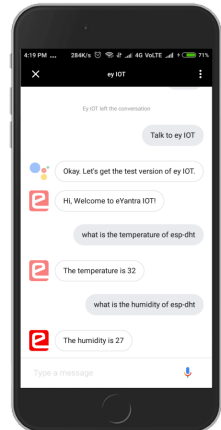

- Teaching the assistant to talk and listen with Intents
- Webhook in JavaScript for providing data & rich UI responses

Flow of the IoT Assistant

# What we have done so far...

- Integrating the IoT assistant with Google Assistant
- Secure user authentication based on OAuth2 token system
- Authenticated user can access and control devices & sensors on IoT platform anytime, from anywhere around the world through internet

# Challenges faced and How we solved them...

## Progress Presentation-I

### Team:

Onkar J. Sathe  
Rohit G. Rath

### Mentors:

Omkar Manjrekar  
Vikrant  
Fernandes  
Deepa  
Avudiappan

## Overview of Project

## Overview of Task

## Tasks Accomplished

## Challenges Faced

## Future Plans

## Thank You

- Implementing OAuth2 Token based authentication between assistant and IoT Platform
- Teaching the assistant to understand IoT words & phrases like Sensor names, Units, Things and properties like temperature, humidity, etc

# Future Plans

## Progress Presentation-I

Deepa  
Avudiappan

## Overview of Project

## Overview of Task

## Tasks Accomplished

## Challenges Faced

## Future Plans

## Thank You

- Integrating the assistant in IoT platform's website with chatbot UI
- Making the assistant dynamic enough to handle variety of devices & sensors with their properties
- Assistant will be able to handle other complex commands on IoT platform like Crons from natural language and generating Rules.
